

and Team Leader in the Energy and Environment Directorate at the Pacific Northwest National Laboratory, a Department of Energy National Laboratory. Trey has his bachelor's degree from Oklahoma State University and his master's degree from American University and has previously served in water research and policy roles at the EPA's WaterSense program, the White House Council on Environmental Quality, and the Office of the Chief, Army Reserve. His research interests are in water resilience policy, alternative water systems, and integrated energy and water planning. He is a Stillwater native, avid Cowboys and Cowgirls sports fan, and mediocre but enthusiastic

long distance runner.

ABSTRACT

Given the lack of a Department of Water within the U.S. federal government, water research is conducted across a wide variety of federal agencies and national laboratories. One of the leading research institutions is the Department of Energy's Pacific Northwest National Laboratory (PNNL). This discussion will provide an overview of the DOE's national laboratory system and PNNL, PNNL's recent research in the water sector, and opportunities for collaboration and training for OSU faculty and students.
